Bellevue, Washington 98004

Dear Ms. Garland:

This letter is in response to your request for Water Quality Certification for the Twin Falls Hydroelectric Project (FERC #4885).

Certification is hereby granted as required by Section 401 of the Federal Water Pollution Control Act, provided the conditions specified in the attached letter are met (March 16, 1983 letter to Hosey and Associates from David Wright).

If you have any questions, please call David Wright at (206) 885-1900.

Sincerely,

Dennis L. Lundblad, Supervisor
Operations Management Division
Office of Field Operations

F.E.R.C. Project No. 4885

Dear Mrs. Garland:

Your request for water quality certification for this project has been reviewed in conjunction with your application for a F.E.R.C. license for this project. Listed below are proposed conditions of certification which must be agreed by the project applicant to enable the certification to be made.

1. The applicant shall obtain and comply with short-term exceptions to the water quality standards for in-stream construction activities associated with the construction of the diversion wier, the diversion intake channel, and cofferdam construction and removal for the tail race and lower levels of the powerhouse foundations.
2. All construction contracts for this project shall contain specific language requiring the preparation of site specific temporary water pollution control plans by the contractor. These shall be submitted to and approved by the project's construction manager or engineer prior to the contractor initiating pollution causing activities. The construction contracts shall also provide specific payment provisions for unanticipated water pollution control measures.
3. All construction contract documents shall contain specific reference to the State Water Quality Standards, WAC 173-201,

Letter to Mrs. Ilene Garland
March 16, 1983
Page Two

as one of the water quality performance standards the contractor must meet.

4. A permanent pollution abatement facility must be provided for the periodic flushing of accumulated sediments from the rock trap sump. (Direct discharge of this material will not be allowed.)
5. The applicant shall obtain and comply with the Department of Fisheries' and Game's Hydraulic Project Approval.

The normal procedure for issuing short-term exceptions to the water quality standards is to require the submission of a 1-page application form together with the Hydraulic Project Approval.

If you will provide a written response of agreement by the applicant to these conditions of certification, I will be able to proceed with further processing of your request. Should you or your client have any questions regarding this matter please feel free to contact me at 885-1900.

Sincerely,

David E. Wright
